ACP Joins Major Health Organizations in Support of the U.S. Surgeon General Advisory on Firearm Violence

ACP fully supports the U.S. Surgeon General Dr. Vivek Murthy’s newly released advisory, Firearm Violence: A Public Health Crisis in America. The advisory details the impact of gun violence beyond death and injury, describing the layers of cascading harm for youth, families, communities, and other populations.

ACP continues advocating for more common-sense policies that will help reduce firearm-related injuries and deaths. Visit acponline.org/firearms for more of our firearm-related content and advocacy efforts.
